The table above reflects a record-breaking year for AgroVantage corn growers who represent more than half the total number of possible winners out of a field of 27. These national winners cross nine production categories of tillage and irrigation with yields averaging more than 298 bushels per acre.

“Since switching to the full AgroVantage System, we have increased our average farm yield at least 50 bushels per acre.”

– Jerry Cox, Multi-Year/Multi-Class National NCGA Champion, Delta, MO
